[LinkedIn](#) | [GitHub](#) | [LeetCode](#) | [Portfolio](#)

A Generative AI Developer focused on building RAG-based systems and backend applications, with hands-on experience in deploying LLM-powered pipelines and integrating them into real-world workflows.

Skills

Programming	Python, C/C++
CS Fundamentals	Data Structures & Algorithms, DBMS, Computer Networks
AI & ML	LangChain, RAG, LLM Integration, Agentic Workflows
Frameworks	Google ADK
Backend Development	Flask, FastAPI
Cloud & DevOps	GCP (Cloud Run), AWS (EC2, S3, IAM)
Databases	SQL, NoSQL, SQLite, Firestore
Tools	Git, Postman

Experience

Droisys | AI Intern Noida | June 2026 – Present

- Engineered conversational AI agents and Generative AI workflows to automate internal business processes.
- Built high-performance REST APIs to securely serve LLM predictions and manage data routing for the backend.
- Integrated multimodal pipelines directly into the company’s core software architecture.

Technical Projects

Archon GitHub
Python, Gemini LLM, FAISS, BM25, LangChain

- Built a production-ready local RAG pipeline enabling chat over 50+ documents.
- Implemented hybrid search (dense + sparse) improving retrieval precision over standard vector search.
- Leveraged Google Gemini 2.5 Flash for lightweight and efficient generation across technical document collections.

DevPilot: Multi-Agent Developer Onboarding GitHub
Python, Google ADK, Gemini 2.5 Flash, PostgreSQL, ChromaDB

- Architected a multi-agent system that routes queries and integrates with the GitHub MCP for repository analysis.
- Engineered an autonomous Text-to-SQL agent capable of introspecting PostgreSQL schemas to dynamically resolve local environment errors.
- Built a Streamlit interface featuring a RAG ingestion engine, instantly converting documents into ChromaDB embeddings for vector search.

Education

GL Bajaj Institute of Technology and Management Greater Noida, UP
B.Tech (Artificial Intelligence & Machine Learning) Oct 2023 – 2027

Trainings & Certifications

AWS Cloud Foundations
